Consciousness, at its simplest, is "sentience or awareness of internal or external existence". Despite millennia of analyses, definitions, explanations and debates by philosophers and scientists, consciousness remains puzzling and controversial, being "at once the most familiar and most mysterious aspect of our lives". Perhaps the only widely agreed notion about the topic is the intuition that ...

[Evolving - definition of evolving by The Free Dictionary](#)

The psychology of self is the study of either the cognitive and affective representation of one's identity or the subject of experience. The earliest formulation of the self in modern psychology forms the distinction between the self as I, the subjective knower, and the self as Me, the subject that is known. Current views of the self in psychology position the self as playing an integral part ...

Self-identity is the feeling of the 'self', the foundational continuity that makes us 'us'. Social identity is constructed by the lens we cast inwards to classify and judge our own being. While each of us is clearly many things inhabiting the same shell - parents, teachers, rugby players, engineers and rock musicians - within this there is a persistent self which adopts these roles ...
